The Death of Print Media

ARCH 346: Anthropology of Design

By Evan Kirkiles

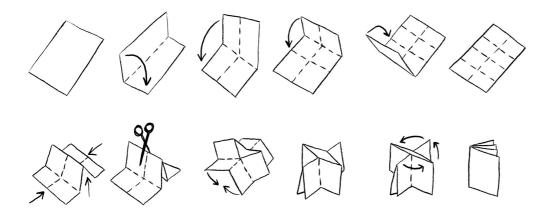

My final project for ARCH 346 is a design response exploring the concept of the death of print media. The main body of the project is less the content in the zines than the CSS layout framework seen on this page that allows printing zine impositions directly from the browser. The goal is to straddle the line between digital and print publishing, creating a unified format that can exist both on the web and in printable book form without additional labor.

Since the inception of digital publishing, print publishing has been in decline. This project investigates a technical manner by which print and digital might be merged in a democratic, distributable manner. Naturally, I do not expect to match the massive featureset of an enterprise tool like InDesign—rather, I envision this project as a zine publishing framework. Zines have historically been produced by communities with minimal resources and a DIY attitude, for which the portability of a website-based typesetting program would be quite useful.

INSTRUCTIONS

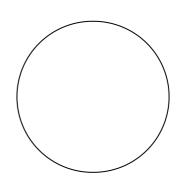

For best print output results, please use either Chrome or Firefox. Enable backgrounds, but disable headers and footers. Pick any page size or orientation you wish and the framework will attempt to morph its content to match. Sample outputs can be found on the right.

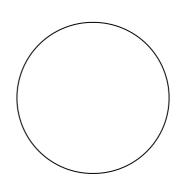

To fold and assemble the zines, follow the below guide:
